

# MFH Assessment

## Child Health in the Core Missouri Counties of the St. Louis Region

What is the current health level of children in various parts of the St. Louis metropolitan area? What resources exist to meet child health needs? Does the location of the resources correspond with where the risks are greatest? Are the resources being accessed?

Vision for Children at Risk set out to answer these questions in the project Child Health at the Core of the St. Louis region. Thanks to the Missouri Foundation for Health for funding this assessment project.

This assessment is intended to serve as a foundation for developing community-wide strategic action that will target the needs identified and help to improve the health of our region's children, especially those most at risk.

## Four Major Findings
